Security Response Drill

Be ready for your next big incident.

Key Benefits

Gap analysis of your current response capabilities

Building readiness within your organization with a simulated attack

Actionable recommend-dations strengthen your resilience to cyber attacks

Verify utility of your current security monitoring tool set

Better understand, prioritize, and mitigate potential threat vectors

What is Preventive Emergency Response?

A Preventive Emergency Response is a part of Emergency Readiness.

It focuses on training for emergencies, closing security gaps in your defenses and strengthening your organization's security posture.

A good Preventive Emergency Response will also guide you on how to create awareness, readiness and confidence within your emergency response team.

Can my organization handle a cyber attack?

To assess, prove and improve your organization's emergency readiness, **VENZO_** cyber security developed a **Preventive Emergency Response Service**.

Stress-test your response procedures and gain experience with high-impact security incidents through our **Security Response Drill**.

> "*Organizations that practice their incident response program find gaps and areas for improvement. Certain exercises also make the computer security incident response team (CSIRT) more comfortable and better equipped when an incident occurs.*"
>
> - Gartner, How to Implement a Computer Security Incident Response Program, 2019

What is a Security Response Drill?

A Security Response Drill is our practical approach to help you evaluate your organization's Emergency Readiness:

We simulate a cyber attack on your organization to verify your disaster and incident response procedures.

This also allows you to familiarize your staff with their critical actions, so that their response in a real emergency will be automatic.

Get expert advisory on how to develop the Drill findings into an actionable plan, re-align your response flow and address critical issues before a real attack occurs.

Prepare your defenses

Minimize an attack's impact on your business: Strengthen your processes and empower your staff to exactly know their roles and responsibilities in an emergency.

Learn from the best

Your leaders benefit from evaluating your plans with **VENZO_**'s expert incident manager and your response team gains valuable emergency experience through our Analysts' scenarios.
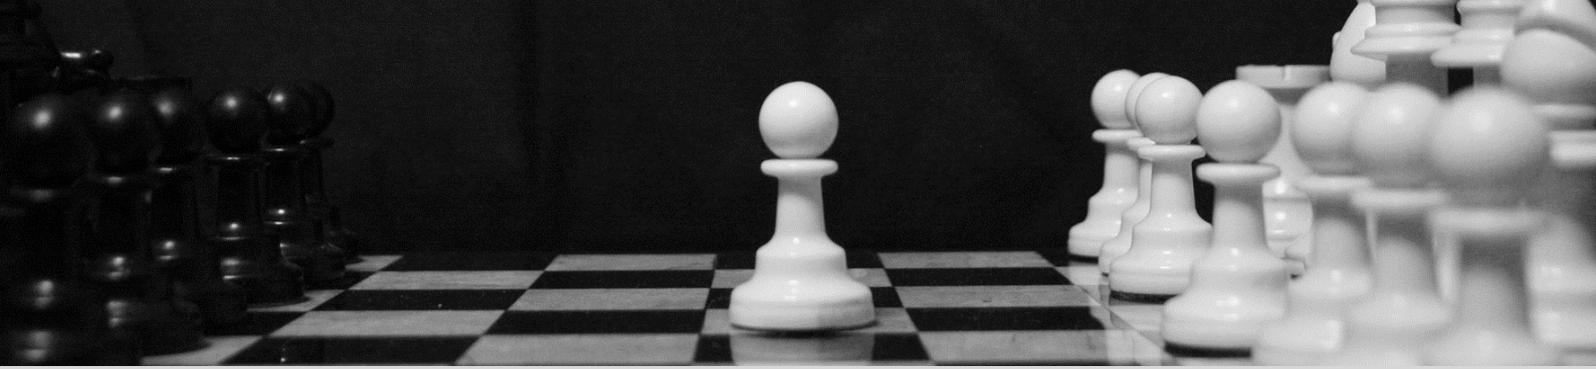

What you will get:

A gap analysis of your current Security Response	Tailored simulation of a high-impact cyber attack	Report on strengths and weaknesses of your current response process	Advisory and recommendations to improve your defenses	Training and awareness based on the Drill findings
